SOURABH SHARMA

Forward Deployed Engineer | Cloud & DevOps | AWS Certified Solutions Architect – Associate

Meerut, India | +91-9557465747 | sourabhsharma14021996@gmail.com | linkedin.com/in/sourabh-sharma1

PROFESSIONAL SUMMARY

Customer-facing engineer with 4.5+ years building, deploying, and operating production cloud systems end-to-end. Combine deep infrastructure expertise (AWS, Kubernetes, Terraform, CI/CD, observability) with a track record of owning complex deliveries from discovery through production cutover — including a full GCP-to-AWS migration for a national publisher. Skilled at operating inside messy, real-world customer environments, translating ambiguous business goals into shipped, working systems, and driving measurable outcomes (30–40% cost reduction, 40% performance gains) for high-traffic platforms serving millions of users.

CORE STRENGTHS

- **End-to-end ownership:** Drove enterprise migrations and multi-service deployments from discovery through production cutover and post-launch tuning.
- **Deploying into complex environments:** Experienced delivering across heterogeneous customer stacks (GCP AWS), multi-account architectures, and large Linux fleets.
- **Reliability under pressure:** On-call, incident response, DR/backup strategy, and SLA ownership for high-availability systems.
- **Problem-to-system translation:** Converted vague scaling, cost, and availability goals into concrete, shipped architecture.
- **Stakeholder communication:** Partnered directly with engineering teams and business stakeholders through migrations, cutovers, and incident bridges.

TECHNICAL SKILLS

Languages & Scripting: Python, Bash, Groovy, SQL

Cloud Platforms: AWS (EC2, EKS, VPC, IAM, RDS Aurora, S3, CloudFront, Lambda, DMS, Route 53, Transit Gateway, CloudWatch, ElastiCache, OpenSearch, Auto Scaling, ALB/NLB, SNS), GCP

Containers & Orchestration: Docker, Kubernetes (EKS), Helm, Cluster Autoscaler, HPA

Infrastructure as Code & Automation: Terraform (modular), CloudFormation, Ansible

CI/CD & DevOps: GitHub Actions, Jenkins, SAST/DAST, Blue-Green Deployments, GitOps

Observability: Prometheus, Grafana, CloudWatch, OpenSearch, Alertmanager

Security & Networking: IAM least-privilege, AWS WAF, SSL/TLS, RBAC, NACL, secrets management, DevSecOps

Databases & Migration: MySQL, Aurora MySQL, PostgreSQL, Amazon RDS, AWS DMS

Operating Systems: Linux (RHEL, Ubuntu, CentOS), Windows Server, Git/GitHub

PROFESSIONAL EXPERIENCE

DevOps Engineer — Appsquadz Software Pvt. Ltd.

07/2024 – Present

- **Owned an enterprise GCP-to-AWS migration end-to-end for The Indian Express** — from discovery and scoping through design, build, production cutover, and post-launch tuning — modernizing infrastructure for scalability and long-term cost efficiency.
- Executed a **zero-data-loss database migration** (GCP MySQL Amazon Aurora MySQL) via AWS DMS with continuous replication and cutover validation.
- Containerized and deployed **13+ microservices on Amazon EKS** with HPA and Cluster Autoscaler, improving resource utilization 25% over the legacy monolithic deployment.
- Designed a **blue-green deployment strategy** enabling near-zero-downtime production cutover, significantly reducing migration risk.
- Delivered **30% infrastructure cost reduction and 40% application performance improvement** post-migration via Aurora tuning and right-sized compute.
- Architected highly available AWS infrastructure across 3 Availability Zones for large-scale OTT streaming supporting India's national broadcaster (**Prasar Bharati**).

- Engineered a **multi-account AWS landing zone** (network, security, workload) with Transit Gateway for centralized, secure networking.
- Built full **Infrastructure as Code with Terraform** for repeatable provisioning across dev, staging, and production.
- Delivered **end-to-end CI/CD pipelines** (GitHub Actions + Jenkins) covering SAST/DAST scanning, Docker builds, integration testing, and Helm-based Kubernetes deployments.
- Enforced **DevSecOps practices**: IAM least-privilege, AWS WAF, RBAC, and secrets management across production.
- Defined multi-region **backup and disaster recovery** strategies for EC2, RDS Aurora, S3, and Kubernetes workloads with defined RTO/RPO targets.
- Reduced cloud spend 40% through rightsizing, tagging governance, reserved capacity planning, and Lambda-based scheduled cleanup.
- Implemented **Prometheus + Grafana observability** with persistent storage, custom dashboards, and SLO alerting for incident response.

System Analyst – Cloud & Linux Infrastructure — Netconnect Global (IBM Project), Noida

03/2022 – 07/2024

- Administered and performance-tuned **50+ Linux production servers** (RHEL, CentOS, Ubuntu) — patching, hardening, and capacity planning.
- Automated server provisioning via Ansible and Bash/Python, **reducing manual operational effort by 60%**.
- Managed AWS core services (EC2, VPC, S3, IAM) for provisioning, access management, and environment operations.
- Deployed Prometheus + Grafana for proactive health tracking, alerting, and incident response across production systems.
- Implemented RBAC-based access control, including provisioning, permission management, and access auditing for enterprise environments.
- Maintained security compliance and SLA adherence; resolved authentication failures and escalated critical incidents within agreed windows.

CERTIFICATIONS

- **AWS Certified Solutions Architect – Associate (SAA-C03)** — Amazon Web Services (Credential ID: 74be9d4f828e496eb4f71f48f43b106b)

EDUCATION

- **B.Tech – Civil Engineering**, Dr. A.P.J. Abdul Kalam Technical University (2014 – 2018)
- **Intermediate – Science**, Dayawati Modi Academy (2013 – 2014)
